Guide to Designing Beautiful Windows

LET’S GET THIS WINDOW PARTY STARTED!
You’ll love how easy it is.
You Deserve A Treat(ment)

1 CHOOSE YOUR LOOK

First, order samples and look at them in the room you’re updating and consider: Will I need privacy? Lighting control? Insulation? Pet and child-safe products? (We recommend cordless, loop control or motorized choices for homes with kids and pets.)

Call us at 800.248.8888 to chat live with our designers.

2 MEASURE YOUR WINDOWS

Choose inside or outside mount, then take a few simple measurements. Use a metal measuring tape for accuracy, and measure every window to the nearest eighth of an inch – windows that look identical may not be.

A step-by-step guide is available at smithandnoble.com/measuring, or we can talk you through it on the phone. Prefer to have us do the measuring? We’ll do it for FREE and we guarantee a perfect fit.

Visit smithandnoble.com/freemeasure or call us at 800.248.8888 to see if service is available in your area.

3 ORDER YOUR PRODUCTS

Call us at 800.248.8888 or go online to smithandnoble.com. Most products will arrive within 7 to 10 business days.

4 INSTALL AND CELEBRATE!

Because it’s like getting a new wardrobe for your windows. For installation in a snap, simple step-by-step instructions come with every product. You can also see them online at smithandnoble.com/installing. And, of course, we’re just a phone call away.
Define Your Project

With any design project, you want to take some time to think about your vision before you jump in and start making decisions. This especially rings true for those investment pieces (like custom window treatments) that you want to love looking at for more than just one or two seasons. We can help you figure out how you plan to accomplish your goals, offering as much independence or as much help as you’d like. See page 25 for details about our complimentary design services.
Form & Function

How do you want the window to feel—tailored, romantic, modern? What do you need your window treatments to do – block the sun, create privacy, make the room less drafty? Do you have unique windows or doors? Do you want to control your shades with remote? Your answers to those questions will ultimately guide you to the window treatment that truly reflects your wants, needs and style. Call us at 800.248.8888 to chat live with our designers if you need more guidance.

Guide To Designing Beautiful Windows | 4
One Size Does Not Fit All

The arch. The clerestory. The skylight. The bay. The sliding door. The french door. We have custom options for every shape. (Yes, even that one.) At S&N, we know windows and doors don’t come in just one size. Which is why every treatment is made-to-order for a flawless fit. We can say with confidence that a ready-made treatment will simply be a misfit.

Guide To Designing Beautiful Windows | 5

Need More Help? See page 25
Coordinate With Confidence

Design elements should tie together (color, pattern or style), even if they’re going in multiple spaces. Matching is not necessary, but there should be a sense of cohesion. A solid plus a pattern is a popular combination - if your window treatment involves a pattern, pair it with a solid color found within the pattern. Mixing multiple patterns can also be fun, as long as they have one color in common. Hardware is designed to coordinate across all product lines and our library of on-trend fabrics and trim, available by the yard, can be used to make your own décor accents.

Grommet Drapery in 17187 Avalon/Teal with Privacy Lining; Cosmopolitan Grand Hardware, layered over Tailored Natural Woven Shades in 16795 Tongli/Ivory with Slim Headrail

Guide To Designing Beautiful Windows | 6
Why custom?

Because a custom window treatment is designed by you and crafted to fit your unique window. You won’t find one exactly like it anywhere else. Just like the perfect accessories and perfect fit make the outfit, a well-dressed window pulls a room together. Let us show you what we can do - find more design solutions at smithandnoble.com/beforeandafter.

Design Challenge

This small seating area was uncomfortably warm during the summer months, due to the room’s southern exposure. The owner wanted to find a way to keep the area cooler without taking away from her beach house aesthetic. She loved the wide molding and wall panels, so it was important for the treatments to be tailored to the windowpanes.

Solution

Cambria Honeycomb Shades with Motivia™ Motorization offered the perfect combination of energy efficiency, light reduction and airy, understated style. The shades’ cellular structure keep rooms cool in the summer and warm in the winter, and their raw linen-like appearance fits in perfectly with the natural textures in the small space. A soft blue color fits the coastal style of the room, and the remote control operation means no one has to break from their reading or relaxing to adjust the shades - it’s simply a matter of pressing a button.
Solution
Relaxed Roman Fabric Shades with Motivia™ Remote Motorization are perfect for filtering the sun’s rays and bringing softness to this space. Their gentle curves offset the straight lines of the furniture and window molding, and the light green pattern picks up on the natural beauty outdoors. Because the shades can be adjusted with the simple touch of a remote control button, the homeowner can always strike the perfect balance of light coverage, no matter the time of day. Coordinating pillows further soften the room and carry the delicate green tones throughout the space.

Design Challenge
This casual living room featured an expansive wall of windows, which made enjoying the space difficult on bright days. The homeowner wanted to diffuse the light with a treatment that would soften the hard lines of the furniture without covering up the crown molding. Because the large sectional made window access difficult, it was important to choose treatments that could be adjusted from a distance.
Design Challenge
This corner seating area boasts a gorgeous view but with too much direct sun for comfort. The homeowners wanted to tone down the brightness of the space - and in doing so protect their furniture and floors from fading - while still being able to enjoy their view. Because they have pets, it was paramount that the treatments they chose be cord free.

Solution
Cordless Sheer Shadings offered everything this space needed - gently diffused sunlight and the ability to enjoy the view. With the vanes open, the homeowners and their pets could enjoy elegantly diffused light and the gorgeous vista outside. The reduction of bright light greatly reduced UV damage to furniture and floors, and the cord-free design made the area ultra-safe for pets.
Design Challenge
This large room came with a series of design challenges—the owner wanted to liven it up with color and pattern, while also bringing light control to the double sliding glass doors and adjacent French doors. Due to the dramatic slanted ceiling, the two sets of doors featured significantly different properties—the sliding glass doors abutted the ceiling while the French doors were situated beneath a tall wall. The owner wanted stylish treatments that could bring cohesion to the space, and could emphasize the height of both the French doors and the sliding glass doors.

Solution
The airy space is instantly enlivened by fresh floral-print drapery. Hung on custom corner rods that are close to the ceiling, the drapery unifies and adds height to the uniquely situated sliding glass doors and French doors. Our Natural Woven Shades serve as a stylish under treatment, bringing a coordinated layer of texture that’s right at home in this natural space, and allowing the homeowners to adjust the light when the drapery is open.
Solution
Because their style is casual and fairly contemporary, the owners hadn’t considered Drapery; they assumed it would be too fussy and formal. All it took was seeing our canvas panels in cool sailor stripes to change their mind. Hung with smooth Traversing Hardware, the panels are easy to open and close, allowing family members to block out bright light during the middle of the day, or let light in during the morning and late afternoon hours. Throw pillows in coordinating colors help to tie the whole room together.

Design Challenge
This cheery and casual living room includes a large sliding glass door, which opens directly onto a yard and pool area. On most days, the sunlight from the yard shines directly into the space, overwhelming the room and its occupants with too much direct light and heat. The homeowners wanted to find a way to control the light while keeping access to the outdoors easy.
**Design Challenge**

French doors that open up to a balcony are a beloved attribute of this light and airy bedroom. The homeowners enjoy the daylight that streams in through the doors and nearby windows, but wanted to find a treatment that could fully block the light when it was time for sleeping. Because their design style is simple and casual, they wanted to make sure their window treatments were neither fussy nor complicated.

**Solution**

With their classic styling and exceptional light control, Luxe Linen Room Darkening Honeycomb Shades were the perfect fit for this bedroom. They efficiently darken the space for sleeping, and because of their cellular structure, have the added bonus of keeping the room cool during summer months and warm during the winter months. Their linen-like texture gives them a slightly elevated appearance and their neutral tone allows them to blend into the window molding when raised. Vertical Honeycomb Shades on the doors allow easy access to the outside, while the horizontal shades on the windows feature Motivia™ Motorization - the owners can lift and lower them from anywhere in the room.
**Design Challenge**
Like a lot of bedrooms, this space called for window treatments that offer a range of light filtering options. During the day, the owner wanted her son to be able to easily open the window when fresh air was desired, as well as fully experience the view. She also wanted there to be an option for filtered light and privacy during the day. At night, the room needed to be completely dark and as quiet as possible.

**Solution**
Two textured Roller Shades on a single headrail allow easy access to the window, should fresh air be desired. The individually functioning shades are fully cordless - and therefore extremely safe - and can be left down for filtered light or fully raised for an unobstructed view. Set behind a unifying cassette valance, they blend nicely into the clean, modern aesthetic. Two Drapery Panels, in a contemporary taupe and black stripe, allow the room to become fully dark at night, thanks to their blackout lining. Hung well above the window, they make the room feel larger, but cozier thanks to the fabric.
**Design Challenge**
This classic bay window with original moulding is gorgeous, so it can be hard to imagine covering it up. But the truth is that when it’s dressed properly, the whole space is far more enjoyable to spend time in. And, even with box panels and a chair rail, the room is understated. The homeowner was looking for an elegant way to add a little drama to the hard-to-fit bay window.

**Solution**
We started with Wood Blinds with ladder tapes to pick up on the wood finish of the floor and chairs, which builds on the custom look of the space. The red drapery fabric - suspended from a custom corner rod designed for bay windows - in a classic ogee pattern adds color and drama. And a crystal end cap plays brilliantly off the glass light fixture for a space that’s polished and inviting.
Solution

Light-blocking Honeycomb shades with cordless top down/bottom up functionality met all of our goals. The minimalist aesthetic fits in with the modern environment, and the colorful fabric adds warmth and character. The top down/bottom up feature offers ultimate versatility in terms of light mitigation, airflow and privacy - and also happens to look really cool. A blackout lining added to the fabric shades on the small windows right next to the bed means the room is optimized for slumber. Pillows made from coordinating fabric pull the space together.
When you think of Southern California style, chances are you envision breezy sophistication, and sun-kissed spaces. Wendy Bellissimo is one of the tastemakers behind that vision. This exclusive collection of window treatments reflect the colors, materials and finishes that inspired not only her own home, but also those of the celebrity clients for which she designs. Wendy Bellissimo was among the first designers to recognize the style potential of nurseries and kids rooms. She is known for creating bedrooms that reflect the sweetness and whimsy of childhood, while still flowing seamlessly with the sophistication of the rest of the home – and almost miraculously, maintaining their appeal from babyhood up through the teen years.
Quick Start Questions

With any design project, you want to take some time to evaluate your functional needs and determine your creative vision. Here are some of the key questions to ask yourself as you get started. Go to page 20 for our Project Worksheet.

- Who uses the room and what is the room used for—playing, entertaining, working, relaxing or sleeping?
- What’s the specific challenge you need to solve? Is there too much glare on your TV or computer screen? Is the sun fading your sofa or wood floor? Is there too little privacy? Is the room too cold or hot?
- What are your favorite colors? Not sure? Check your closet. Usually the colors we love most are reflected in our wardrobes as well as our homes.
- Are there patterns or colors in the room? Or are most of the furnishings solids or neutrals?
- What’s the style you hope to achieve? Casual or formal? Dramatic or minimal? Traditional or modern? Eclectic or classic?
- Are your windows tall or hard to reach?
- What’s your budget?

Guide To Designing Beautiful Windows
**Sample Project**

UNLEASH YOUR INNER DESIGNER
(No one needs to know we helped.)

**LUXE LINEN ROOM DARKENING HONEYCOMB SHADES**

Room Darkening materials are ideal for bedrooms, nurseries, media rooms or anywhere light blocking is required for privacy & enhanced insulation.

**VERSATILE LAYERING**

While beautiful on their own, Honeycomb Shades are an inspired first layer under Drapery or a Cornice.

**ENERGY EFFICIENT**

The hexagonal cell shape of these cellular shades traps air in an insulating layer between your room and the outdoors - lower heating bills in the winter, less AC in the summer.

**CHILD & PET SAFE**

Every Smith & Noble window treatment meets and exceeds strict safety guidelines.

Measuring For Blinds & Shade

Use a metal measuring tape to ensure accuracy. Starting from the left-most window and working to the right, measure every window throughout the room. Round down to the nearest one-eighth of an inch. Write down and label all measurements and windows. Download a worksheet from our website at smithandnoble.com/worksheet.

**INSIDE MOUNT**

Inside mounts provide a finished, built-in look without covering the window molding.

**Note:** Inside Mount requires a minimum 2” unobstructed mounting depth within your frame (most styles).

If your frame isn’t deep enough for the style you’ve chosen, use outside mount.

**MEASURING INSIDE MOUNTS**

1. Measure the width of the window frame at three locations: top, center and bottom. The smallest of the three measurements is your ordering width. **Note:** For Roller, Solar, Sheer Shadings, or Verticals record only the top width.
2. Measure the height of the window frame at three locations: left, center and right. For vertical treatments, use the shortest height. For horizontal treatments use longest height.
3. Measure window frame depth, from closed window, or any obstacle*, to edge.

**OUTSIDE MOUNT**

Outside mounts can make a window appear larger. When windows are not square, or there is not sufficient frame depth for inside mounting, an outside mount is recommended.

**Note:** Requires minimum 2” flat surface above your window or on the window frame for mounting brackets (most styles).

Visit us online for overlap specs for each product (Measuring Guide).

**MEASURING OUTSIDE MOUNTS**

1. Measure the outside width of the area you wish to cover in three locations: top, center and bottom. If space allows, we recommend adding overlap to reduce light. **Note:** Roller, Solar and Sheer Shadings fabrics will be approximately 1” narrower than ordered.
2. Measure the height of the area you wish to cover in three locations: left, center and right. **Note:** The longest of the three is your ordering height.

**BLINDS & SHADES CONSIDERATIONS**

**SQUARENESS**

Your window should be square, or treatments may not work properly or hang attractively. Check for squareness by measuring diagonally in both directions. If measurements differ by over ¼”, use outside mount.

**SURFACE ABOVE WINDOW**

Measure area you wish to cover, including allowance for mounting brackets and any overlap desired on surrounding wall. Specify any extension brackets needed to clear handles, cranks, etc. as one of your No Charge Options. See Product Stacking Height or Width at smithandnoble.com/measuring to determine the wall area your treatment will cover when fully open.

**OBSERVATIONS**

Obstacles such as window handles or cranks could interfere with your treatments’ operation with inside mount. In such cases, consider outside mount.
**Measuring For Drapery**

**CHOOSE SINGLE PANEL OR PAIR**

**SINGLE PANEL**
- One individual panel
- Choose Left, Right or Center panel

**PAIR**
- Two equal panels: (1 Right, 1 Left)
- The width you specify will be divided into 2 equal panels totaling your overall width

**MEASURE PANELS & DRAPERY**

1. **Measure the width.** To create a visually larger window: add 6”–12” on each side, beyond window edges. **Note:** all styles come with fullness built in, so order exact width needed.

2. **Measure height from top to bottom.** Include Tabs or Rod Pockets (Tie Top measured from top of panel to bottom of panel). **Note:** These styles are normally ordered to be installed 4” min. above the window or near the ceiling. Be sure to add these extra inches to your final measurements to ensure the correct height.

3. **Adjust your height based on the treatment you are ordering.** **Note:** For Rod Pocket and Tab Top Panels, add ¾” to 1¾” depending on rod size. For Grommet styles, add 1”. Deduct 1½” to 3½” if you’re hanging your panel from rings, depending on ring selection. See smithandnoble.com/measuring for more information.

**DRAPERY CONSIDERATIONS**

1. **FLOOR HEIGHT**
   - Treatments that will be opened and closed regularly should fall ½” above the floor or carpeting so they skim that surface.
   - We recommend using traversing hardware.

2. **SLIGHT BREAK**
   - Add 1-4” of length for a thoughtfully-finished, designer look.

3. **EXTRA LONG PUDDLE HEIGHT**
   - Add another 5-10” of length, which is to be arranged in poufs on the floor (not recommended high traffic areas).

4. **VALANCE**
   - For panel styles that will be used as a top treatment or valance, we recommend approximately 10-20” for length.

5. **SILL HEIGHT**
   - A great choice for a window in a recess or above furniture, or for one that is opened frequently.

6. **APRON HEIGHT**
   - For ideal proportions, this look should fall 4” below the sill.

7. **CAFÉ HEIGHT**
   - Panels usually measure one-half of the window length. These styles are useful for kitchens, allowing for natural light and privacy. Petite Rods (less than 1” in dia.) are the best choice for smaller windows. We recommend Medium Rods (1” in dia.) for larger windows.

8. **DOUBLE LAYER TREATMENTS**
   - To mount two panels over one window (e.g. a sheer behind an opaque fabric), indicate which will be the back treatment and which will be the front treatment. Use identical measurements and specify double rod hardware.

9. **HARDWARE**
   - The rod width you specify on your order does not include the width of the finials on each end. Finials add ½” to 9½” on each end, depending upon the style. Hardware is ordered with the same width as drapery. For exact finial widths by style, visit us at smithandnoble.com or call us at 800.248.8888.

**Guide To Designing Beautiful Windows**

**Need More Help? See page 25**
Measure Worksheet

Use this space to record your window dimensions for easy reference when filling out your order form. To start, all you need is a steel measuring tape (cloth tapes are not accurate), and a pencil. Remember to round your measurements down to the nearest eighth of an inch (¼”). *Tip:* One of the most common mistakes is to transpose the width and height measurements. If your situation is unique or unclear, please call for assistance at 800.248.8888. Our customer service representatives are available to help you in any way you may need.

Guide To Designing Beautiful Windows | 24
We’re Here To Help!

From design advice to professional measuring and installation, we can help you with every aspect of your project. It’s easy and fun to create beautiful solutions that reflect your personal style. Choose one of our three easy paths to simply beautiful windows.

Design-it-Yourself

You design, measure & install - we’ll help call 800.248.8888

It’s easy and fun – with Free Samples, and expert help from our on-phone designers and website. Select your style and materials, take a few simple measurements and place your order. Installation’s a snap.

Measure & Install

You design, we measure & install smithandnoble.com/freemeasure

Complimentary no-obligation measuring and low-cost installation, plus guaranteed perfect fit. You have fun designing, with free samples and expert help from our on-phone designers and website, and we’ll take care of the rest.

In-Home Design

You chill, we come to your home smithandnoble.com/freedesigner

All of the fun of a design project, and none of the hassle. One of our experienced designers will bring samples to your home, and will help with everything form product and material selection to detailed window measurements. The design and measuring service is complimentary - you pay for only for products, shipping and installation.
