

### 3 SIMPLE STEPS TO A BRAND NEW VIEW

Our measuring guide will take you through the steps you need to measure your windows.

Just a few simple measurements are all you'll need - and if you'd like some help, or have questions, we are always here to help.

1. Choose inside or outside mount
2. Take the appropriate measurements
3. Call or go online to order

### TIPS TO MAKE MEASURING MORE ACCURATE:

- Use a metal measuring tape to ensure accuracy.
- Measure every window, even if they appear identical.
- Round down to the nearest one-eighth of an inch.
- If you're measuring more than one window in a room, work through the room from left to right. Label each window.
- Write down and label all measurements.

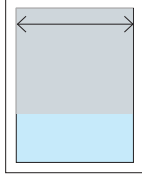

If you prefer, we can measure your windows for you - our Guaranteed Fit service is available in most areas. Visit [smithandnoble.com/services](https://smithandnoble.com/services) or call us at 800.248.8888 for details.

# Measuring Considerations for any Window Treatment

## Select Inside or Outside Mount

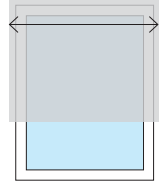

### INSIDE MOUNT

Inside mounted shades are contained within your window frame. Many people prefer an inside mount because it provides a finished, built-in look without covering the window molding; it is also suggested for the 1st layer of a layered window treatment.

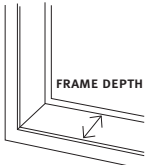

### OUTSIDE MOUNT

Outside mounted blinds or shades are mounted on your wall or molding. They are often used to make a window appear larger or to hide a less-than-attractive window, when windows are not square, or when there is not sufficient frame depth for inside mounting.

## Considerations In Choosing Inside Mount Vs. Outside Mount

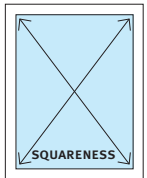

### FRAME DEPTH

Inside Mount requires adequate mounting depth within your frame. At least 2" is enough for most treatments. If your frame isn't deep enough for the style you've chosen, you should use Outside Mount. See chart for Product Depth.

### OBSTACLES

Check for any obstacles on your window, such as handles or cranks, that could interfere with your treatment's operation with an Inside Mount. If there are such obstacles, you should consider Outside Mount.

### SQUARENESS

For Inside Mount your window should be square, otherwise your treatment may not work properly or hang attractively. To check for squareness measure diagonally in both directions. If measurements differ by over 1/2", you should use Outside Mount.

### SURFACE ABOVE WINDOW

Outside Mount requires at least 2" of flat surface above your window or on the window frame for mounting brackets. See chart for [Recommended Overlap](#) below.

Using a metal tape, measure the area you want to cover, including any overlap on the surrounding wall. Remember you must have at least 2" of flat surface above the window opening to allow space for mounting brackets.

When you specify Outside Mount (except for Roller or Solar Shades, or Illusions Shadings) your treatment will be made to the exact size you specify (excluding trim). Roller, Solar and Illusions fabrics will be approximately 1" narrower than ordered. You can also order the treatment wider to avoid light gaps.

Also specify any extension brackets needed to clear handles, cranks, etc. as one of your No Charge Options.

See [Product Stacking Height or Width](#) on next page to determine the wall area your treatment will cover when fully open.

# Measuring & Order Guide

## If You Have Selected:

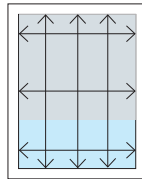

### INSIDE MOUNT

**STEP 1:** Measure the inside width at 3 locations, top, middle and bottom. Record the smallest of the 3 measurements. This is your ordering width. We make the necessary deductions (approximately 1/2").

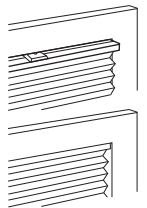

**Note:** If you are ordering for a Roller or Solar shade, record only the top width.

**STEP 2:** Measure the height at 3 locations, left, middle and right side. Record the longest of the 3 measurements. This is your ordering height.

**PLEASE NOTE:** When measuring for an inside mount, do not add to the size of your product for a tighter fit. It will not fit properly in your window.

### Product Depth

### MINIMUM DEPTH

You'll need this much unobstructed depth, including any handles, locks, etc., to Inside Mount that treatment.

### FLUSH MOUNT

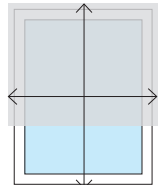

For the face of your treatment to be flush with the wall, make sure your frame depth is the same or greater than the Flush Mount depth indicated on the chart.

## If You Have Selected:

### OUTSIDE MOUNT

**STEP 1:** Measure the outside width of the area you wish to cover. If space allows we recommend adding overlap to reduce light, see [Recommended Overlap Chart](#) below. This is your ordering width.

**STEP 2:** Measure the height of the area you wish to cover. This is your ordering height.

### Recommended Overlap

Product	Overlap Width, Outside Mount	Overlap Height, Outside Mount
Horizontal Blinds & Shades	3" (1 1/2" ea. side)	2" top, 1 1/2" bottom
Roller Shades	3" (1 1/2" ea. side)	2" top, 1 1/2" bottom
Sheer Horizontal Shadings	6" (3" ea. side)	3" top, 1 1/2" bottom
Drapery & Panels	12" (6" ea. side)	4" top; 4" below sill, or 1/2" above floor
Valances & Cornices	2" (1" ea. side)	2" top

# Measuring & Order Guide

## You May Order Drapery as Single Panels or in Pairs

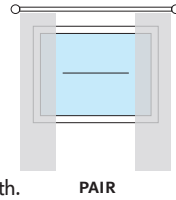

### SINGLE PANEL

- One individual panel
- Choose Left, Right or Center panel

### PAIR OF DRAPERY

- Two equal panels (1 right, 1 left)
- When ordering a pair of drapery the width you specify will be divided into 2 equal panels totaling your overall width.

Example:  
Width ordered at 100" as a pair. You will receive two 50" panels.

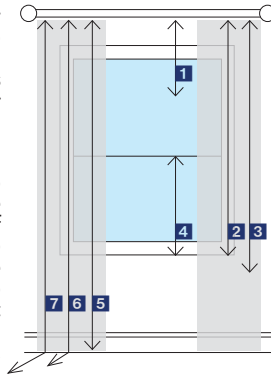

## Measuring for Panels + Drapery

### TOTAL WIDTH

Measure the width you wish to cover: all styles come with fullness built in, so order exact width needed. If space allows, we recommend adding 6" to 12" on each side, beyond window edges: this makes windows look larger and allows fabric to stack clear of windows when drapes are fully open.

### TOTAL HEIGHT

Finished height is measured from top to bottom, including tabs, or rod pockets (Tie Top measured from top of panel to bottom of panel). These styles are normally ordered to be installed 4" above the window or near the ceiling (be sure to add these extra inches to your final measurements to ensure the correct height). All Drapery styles can be ordered as Drapery Valances up to 20" in length. All rings & hardware are sold separately.

### PLEASE NOTE:

Fabrics made with natural fibers may experience slight changes due to variables in the environment such as humidity, temperature and moisture. This is to be considered normal. If this is a concern, consider ordering a length that includes a small puddle.

### DOUBLE LAYER TREATMENTS

To mount two panels over one window (e.g. a sheer behind an opaque fabric), indicate which will be the back (closer to the window) and which will be the front treatment. Use identical measurements (small deductions will be taken on back treatment) and specify double rod hardware.

### Single Pleat (150% Fullness)

Fabric Widths	1	2	3	4	5	6	7	8	9	10
Finished Widths	up to 31"	31½ - 67"	67½ - 103"	103½ - 140"	140½ - 173"	173½ - 209"	209½ - 244"	244½ - 280"	280½ - 317"	317½ - 353"

Finished Widths	up to 24"	24½ - 37"	37½ - 50"	50½ - 60"	60½ - 76"	76½ - 90"	90½ - 103"	103½ - 116"	116½ - 129"	129½ - 142"	142½ - 157"
Ring Quantity for Single Panel (6" spacing)	10	14	19	23	27	32	36	41	45	50	55

### Soft Top (200% Fullness)

Fabric Widths	2	2.5	3	3.5	4	4.5	5	5.5	6	6.5	7
Finished Widths	up to 44"	44½ - 58"	58½ - 71"	71½ - 85"	85½ - 98"	98½ - 112"	112½ - 125"	125½ - 139"	139½ - 152"	152½ - 166"	166½ - 179"
Ring Quantity for Pair (6" spacing)	20	24	30	34	38	42	46	52	56	60	66

## Measuring for Hardware

The rod width you specify on your order does not include the width of the finials on each end. Finials add ½" to 9½" on each end, depending upon the style. Hardware is usually ordered same size as drapery. For exact finial widths by style, call Customer Service.

## HEIGHT SUGGESTIONS FOR PANELS+DRAPERIES

**1 VALANCE** - For panel styles that will be used as a top treatment or valance, we recommend approximately 10-20" for length.

**2 SILL LENGTH** - A great choice for a window in a recess or above furniture, or for one that is opened frequently.

**3 APRON LENGTH** - For ideal proportions, this look should fall about 4" below sill.

**4 CAFÉ LENGTH** - Panels usually measure ½" of the window length. These styles are especially useful for kitchens, allowing both natural light and privacy. Best hardware for these are Petite Rods (less than 1" in dia.) for smaller size windows or Medium Rods (1" in dia) for bigger windows.

**5 FLOOR LENGTH** - Treatments that will be opened and closed regularly should fall about ½" above the floor or carpeting so they skim that surface. We recommend using traversing hardware.

**6 SLIGHT BREAK** - Add 1-6" of length for a thoughtfully-finished, designer look.

**7 EXTRA LONG PUDDLE LENGTH** - Add another 6-10" of length, which is to be arranged in poufs on the floor (not recommended for windows in high traffic areas).

### Drapery Stacking Width (in inches)

Order Width	24"	48"	72"	96"	120"	144"	168"	209"	over 209"

**Fabric Shades:** Slim Headrail - add ½" to the stacking height above. Loop Control - add 3" to the stacking height to left.

\* Additional upgrades and options may affect stacking, as well as your choice of materials. Please contact Customer Service for details.

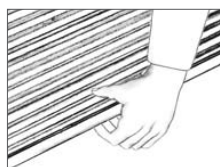

\*\*Stacking area will vary with fabric choice; above is based on medium-weight fabrics. Heavier or bulky fabrics will require more stacking area.

~ Honeycomb Cordless and Loop Control add ¾"

+ Stacking width on each side.

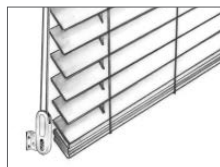

TD/BU = Top Down/Bottom Up

## Which Functional Enhancements are Right for You?

### CORDLESS CONTROL

Eliminates dangling lift cords for greater safety & uncluttered look. Light pressure on bottom rail lifts or lowers shade. Order with Wood, Durawood Blinds, Honeycomb, Pleated, Fabric Shades, Classic Roller, Solar Roller, Sheer Shadings and Natural Wovens.

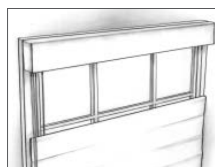

### LOOP CONTROL

Raises even large shades easily & evenly. A guide keeps cords in place for added safety; clutch stops & holds shade precisely at any height. Order with Honeycomb, Natural Woven, Pleated, Fabric Shades, Wood Blinds. An option at no charge on Classic Roller Shades, Solar Roller Shades, and Sheer Shadings.

### 2-WITH-1 VALANCE

Two separate blinds with one valance. Required for windows over 72" wide. Minimum width dependent on control option. Order with Wood Blinds.

### TOP DOWN/BOTTOM UP

Maintain privacy below while letting natural light in from above with this unique upgrade. Your shade will open from the top or raise from bottom. Order with Honeycomb, Natural Woven Flat Fold & Tailored Shades, Pleated, Flat or Classic Roman Fabric Shades.

### 2 ON 1 HEADRAIL

Multiply light control options by combining two shades on one headrail so they can be raised independently, yet convey a uniform, streamlined appearance. Order with Honeycomb, Natural Woven, Pleated, Flat, Classic or Soft Roman Fabric Shades, Durawood, Metal Blinds or Sheer Shadings.

### ROOM DARKENING: LINING OR BLACKOUT OPTIONS

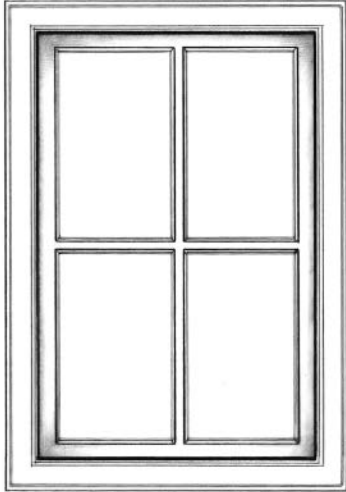

We offer perfect choices for bedrooms, nurseries, media rooms and anywhere needing total light control. Lining Upgrades are available on Natural Woven Shades, Panels & Drapery or Fabric Shades (Fabric Shades include Privacy Lining at no charge). Special Blackout materials or construction is offered on Honeycomb Shades, Roller Shades, Pleated Shades, Horizontal and Vertical Sheer Shadings.

## Measuring Worksheet

Use this space to record your window dimensions for easy reference when filling out your order form. To start, all you need is a steel measuring tape (cloth tapes are not accurate), and a pencil. Remember to round your measurements down to the nearest eighth of an inch ( $\frac{1}{8}$ ").

TIP: One of the most common mistakes is to transpose the width and height measurements. If your situation is unique or unclear, please call for assistance at 1.800.248.8888. Our customer service representatives are available to help you in any way you may need.
